Floor plan

10 x 10 m clear · 8 buttresses · printed walls

1. Printed wall 400 (= ring beam width = roof base width). Buttresses 300 wide, 700 long from the inner face (flush with the wall inside), so they project 300 outside.
2. Openings, one per bay between the buttresses: doors 1000 (south-west and north-east bays), windows 1800 in the other six. Positions and sizes are placeholders.
3. Pyramid roof above (dashed): 1000 square crown, hips to the corners, roof base 400 thick square to the slope, so its outer edge lands about 59 outside the wall face.
4. Buttresses at the 4 corners and the 4 mid-spans, axes 5200 apart (centre to centre of wall).

Notes

Section A-A cuts through the east and west mid-span buttresses.

Detail D1 is the eave at the east mid-span buttress.
